

Conceptually, first, the map was generated. Then, the interactive part of the map was included. After that, the column at the left hand side was generated. Then, the data acquisition and processing process was done to be used in the radar pie chart. In the final code, the order of execution of these steps eventually changed.

A design decision was to remove from the map the countries for which no NUTS 3 regions exist (Ukraine, Moldova, Bosnia and Herzegovina, UK), as well as removing from the map some (Portuguese, Spanish and Norwegian) islands far from mainland Europe that made the map skewed, in order to maintain a better proportioned map.
